Table of Contents

Response of <i>Setaria Faberii</i> to High Lime Soils – NANCY HUANG, RUSSELL S. ADAMS, JR	2
Economic Impact of an Air Base on the Duluth–Superior Region – WAYNE A. JESSWEIN, RICHARD W. LICHTY	6
Call for papers to be presented at Annual Meeting of the Academy	10
Notes on Serality and Manility – HANS W. WENDT	12
Partial Sterility in <i>Drosophila Melanogaster</i> ; Schemes for Complex Chromosome Arrangements – RICHARD V. KOWLES, JOHN RICHARDS, CHRISTINE ADAMS, JENI LICHTENFELS, ROBERT TRAUSSCHT, ROBERT HUSFIELD	14
An Electrophoretic Study of <i>Clinostomum Mar-</i> <i>ginatum</i> (Trematoda) – DALE E. GREENWALT, HAROLD A. BORCHERS	18
HAROLD A. BORCHERS	18

ON THE COVER - The cover illustrations are related to the study of *Setaria Faberii* reported by Nancy Huang and Russell S. Adams, Jr. The potted plants are growing on Ontonagon c soil samples, and numbers represent the percentage of calcium carbonate added. The cover illustration is Figure 4 of the paper. The graphs are figures 2 and 3. Figure 1 appears with the paper on page 5. Both graphs indicate dry matter production of *S. faberii* on different soil types. The graph at left (figure 2) shows five soil types with calcium carbonate added to simulate natural variations. Data for Lester Milaca, and Svea soil samples are combined. The graph at right covers four soil types with calcium carbonate added to simulate agricultural liming. Data for Milaca and Zimmerman soil samples are combined.

The Minnesota Academy of Science does not take a stand on issues which may be discussed in articles published in the *Journal*. Readers should bear in mind that views expressed in these articles are strictly those of the authors.
