ON THE COVER – The Bell Museum of Natural History at the University of Minnesota in Minneapolis is known widely to the general public as well as to faculty and students on campus as a depository of bird and animal exhibits and information. The museum is, however, a resource of botanical importance too. An article in the centerfold of this *Journal* issue pictures and identifies tree and plant material in the Bell Museum and discusses instructional uses of such material.

The Minnesota Academy of Science does not take a stand on issues which may be discussed in articles published in the *Journal*. Readers should bear in mind that views expressed in these articles are strictly those of the authors.
