3-20-61

Pre-professional training in more than 20 areas will be offered at the University of Minnesota, Morris Dean Rodney A. Briggs announced recently. The course offerings in each area have been designed to insure the transfer of qualified students to the professional colleges located at the University's Minneapolis Campus or at other institutions.

One of the more frequently chosen but most difficult pre-professional sequences available at UMM is pre-engineering.

The UMM program in this area is essentially the same as the first two years in the University of Minnesota's Institute of Technology and includes two years of physics, two years of mathematics including college algebra, trigonometry, calculus, analytic geometry and differential equations, one year of inorganic chemistry, one year of college English, one year of drafting, and electives in the biological or social sciences.

This two-year highly competitive sequence provides the basis for technical training in aeronautical, agricultural, civil, electrical, geological, industrial and mechanical engineering, as well as geophysics, applied mathematics, metallurgy and architecture.

Further information may be obtained from the Office of Student Counseling at the University of Minnesota, Morris.
